

## Standard Tubular Motor

Electrical Curtain using synchronous gear motor made by japan and taiwan. size of motor is small impact however high power, can pull up to 100kg curtain. The device according to customer needs install electrical speed adjustable, to achieve the flexibility of speed to move the curtain. The device has a good motor delay, over-current protection circuit. The first stage of overseas technology to adopt special aluminum tracks, pulleys imported bearings, smooth running track, minimal noise, and can be connected.

(System control) electric curtain can be controlled by mechanical push-button, infrared or radio remote control, you can connect to multimedia central control system and can be programmed to achieve remote control, you can use timer, light control, wind control and other intelligent control
